

May 19 – May 23

Monday 10:30-12:00, Room "Ali Asllani" Building A, Registration, Opening Ceremony, and panel discussion about artificial intelligence.

Monday 14.00-15.30, Room C100, Module one: Get Data

- Introduction of the Data Science Life Cycle.
- Introduction to RStudio in Posit Connect
- Sources of data to include Open data.
- Different types of data formats: .csv files, excel files, urls, compressed data, Arrow-Parquet
- Rectangular data, vectors and data frames in R
- Methods for getting rectangular data from other sources or files into R data frames.
- Viewing data and getting summary statistics about data in R data frames

Monday 16.30-18.00, Room C100 Module two: Clean and Reshape data

- Cleaning data
- Filtering rows using logical comparisons and %in%.
- Selecting columns using names and tidyselect.
- *Reshaping data using pivots.*

Tuesday 10.30-12.00, Room C100, Module three: Visualize Univariate Data

- Variable types: continuous vs categorical
- Plots for continuous variables
- Plots for categorical variables
- Customizing plots
- Example of dynamic titles

Tuesday 14.30-16.00, Room C100, Module four: Visualizing Multi-Variate data

- Create bivariate point plots and box plots.
- Use plot aesthetics to code by additional variables.
- Add and interpret linear and non-linear smoothers.

Wednesday 10.30-12.00, Room C100, Module five: Statistical tests and models

- Why statistical tests and understanding a Null hypothesis.
- Interpreting a p-value.
- Using and interpreting the t.test function, aov/anova, and lm functions in R.

Wednesday 14.30-16.00, Room C100, Module six: Classification Models

- Binary Classification
- Logistic Regression
- Confusion Matrices and metrics

Thursday 10.30-12.00, Room C100, Module seven: Overfitting and Bias-Variance Tradeoff

- Degrees of Freedom and Restrictive versus flexible models
- Over-fitting
- Bias-Variance Trade off
- Validating and models by splitting data.

Thursday 14.30-16.00, Room C100, Module eight: Evaluating and Tuning Models

- Optimizing Loss Functions
- Evaluation Metrics
- Variable Selection and Partial F-Tests
- ROC Curves in Classification

Friday 09.30-11.00, Room C100, Module nine: Neural networks

- Convergence of big data, big processing power (GPUs), and algorithmic advances.
- Neural Network architecture
- Role of Activation Functions and gradient descent and back-propagation.
- Challenges in Over fitting and convergence

Friday 12.00-13.30, Room C100, Module ten: Generative AI and prompt engineering

- Generative AI compared to predictive models.
- Tokenization and Embedding
- Semantic similarity for prediction.
- Dangers of overfitting and the need for regularization.
- Elements of prompt engineering.

Friday 13:45-2:30 Distribution of certificates
